

Lab 2 – Agile Backlog Creation & Sprint Simulation in Jira

Scenario: Campus Placement & Internship Pipeline

1. Backlog: Epics and User Stories

The screenshot displays the Jira interface for the 'Shailaja_SE_Lab' space. At the top, there's a search bar and a '+ Create' button. Below the space name, navigation tabs include 'Summary', 'Backlog' (selected), 'Board', 'Docs', and 'Development'. The 'Backlog' section shows two main areas:

- SCRUM Sprint 1** (2 Sep – 9 Sep, 0 work items): This section is currently empty, displaying 'There's nothing in this sprint' and a '+ Create' button.
- Backlog** (5 work items): This section lists five tasks, each with a status of 'To Do' and a priority level. The tasks are:
 - SCRUM-12: Track Interview Rounds (Priority: 5)
 - SCRUM-13: Send Offer Letter (Priority: 5)
 - SCRUM-9: Resume Upload (Priority: 8)
 - SCRUM-10: View Eligible Drives (Priority: 3)
 - SCRUM-11: Apply to a Drive (Priority: 3)
 A '+ Create' button is located at the bottom of this list.

The interface also includes a sidebar with a search bar, a user profile icon, and a menu icon. A small Jira logo is visible in the bottom right corner.

2. Burndown Charts

Sprint 1 (Resume Upload, View Eligible Drives, Apply to a Drive)

Sprint 2 (Track Interview Rounds, Send Offer Letter)

3. Reflection Questions

1. Did your estimations reflect the actual effort?

Mostly. Resume Upload was the heaviest story (8 points) since it involves both file handling and matching against eligibility rules, while smaller stories like viewing eligible drives or applying to a drive felt closer to the 3-point estimate once broken down.

2. Was your backlog well-prioritized?

Yes. The high-priority items (screening and applying) were scheduled in Sprint 1, since nothing else in the pipeline can happen until a student is marked eligible and has actually applied to a drive. Interview tracking and offers came after, in Sprint 2, since they depend on Sprint 1's work.

3. How did your simulated sprint align with your plan?

Both sprints completed all planned stories with no scope changes, since this was a simulated single-person sprint rather than a real multi-developer team working over a full week.

4. What insights did the burndown chart give about your team's capacity?

Since all stories were moved to Done within minutes rather than spread across the sprint's real calendar days, both burndown charts show a sharp vertical drop instead of a gradual staircase. In an actual team sprint, a drop this steep this early would usually be a sign of under-committing during sprint planning, or of the sprint being simulated rather than run in real time.
